FIGUR 5 | FJERNVARMEPRISER OPDELT EFTER EJERSKABSTYPER, AUGUST 2016

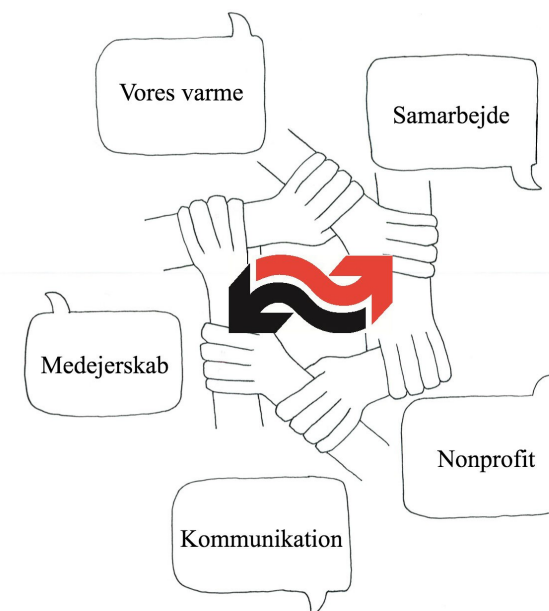

Kilde: Figuren er baseret på Sekretariatet for Energitilsynets inddeling af fjernvarmeforsyningerne efter ejerskabstype, ud fra hvem der har bestemmende indflydelse i selskaberne. Priserne er hentet fra Energitilsynets prisstatistik fra august 2016, som er baseret på anmeldelser til Energitilsynet fra 2015/2016.

Note: Det er kun forsyninger med leverance til husstande, der indgår i figuren. Priserne i figuren angiver den årlige varmepris inklusive moms for en standardbolig på 130 kvm. og et årligt varmeforbrug på 18,1 MWh.

THE DISTRICT HEATING COOPERATIVE:

- The board members are local consumers = interest of consumer is the main focus.
- Budget, account, heating price have to be accepted and approved by the board members.
- = a stable and affordable heating price!
- Focus on investment in renewables and energy efficient measures that lower the costs of supplying heat → impede the development of energy poverty!

EBO CONSULT & THE DISTRICT HEATING COOPERATIVE IMPEDE ENERGY POVERTY BY:

- Offering an energy loan = enables more consumers (despite their social background and income) to have the financial resources to install renewable district heating.
- Offering a free technical service of the district heating units to achieve energy savings at the consumers and to raise awareness about potential energy savings in the household.
- Offering cheap integration of renewables in buildings, owned by housing associations.

FROM THE BIG HOUSE TO THE SOLAR HOUSE:

- Got the idea to promote solar energy in a CHP area and to create the first CHP multi-storey building in the area with no subsidies.
- PV-panels on the side of the building and solar thermal installation on the roof.
- The tenants paid for the PV-panels and the district heating cooperative paid for the solar thermal installation.
- A new image for the area was created.
